

New Design Tool Pack Cradle

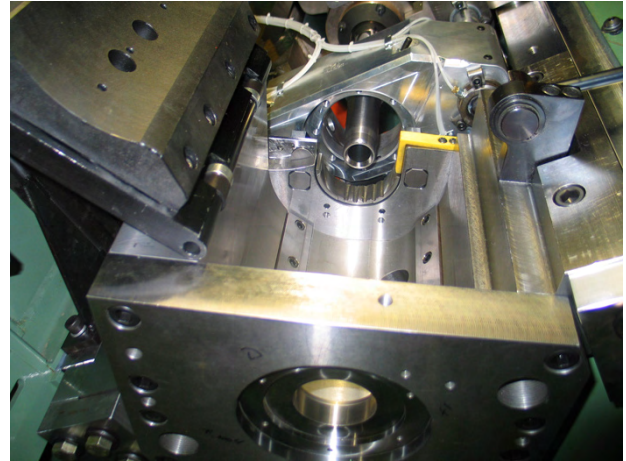

For the Stolle Ragsdale Bodymaker
April 2008

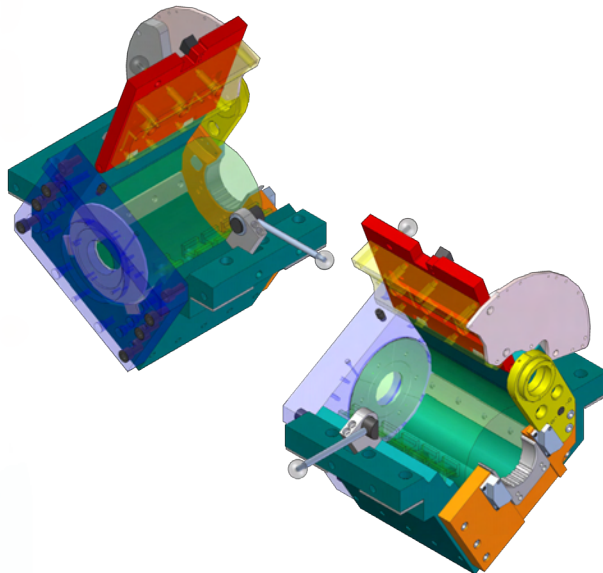

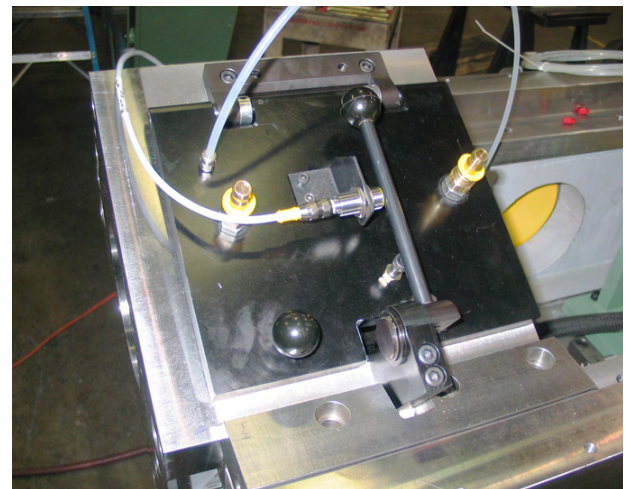

Stolle CMD is offering a redesigned tool pack cradle for the Ragsdale Bodymaker that provides faster and easier access to the tools. This means that the reduction tools can be more easily and quickly changed out to run multiple can heights and diameters - from 33cl to 50cl size and 211 to 202 diameter.

The cradle is designed to hold a Pride® floating tool pack which allows you to run a larger operating window on the DWI process. The cradle will maintain the tooling alignment for a longer period, and it features a better tool clamping arrangement for both the top cover and axial clamp. Since only occasional tool setup is required, the new design cradle is more reliable and user-friendly for general bodymaker line operators. The improved tool access also allows easier scrap removal from tear-offs.

Please contact Stolle CMD at 303-708-9044 for more information on the redesigned Ragsdale tool pack cradle.
