

Redesigned Bull Gear

for the Stolle 6-Color Rutherford Decorator

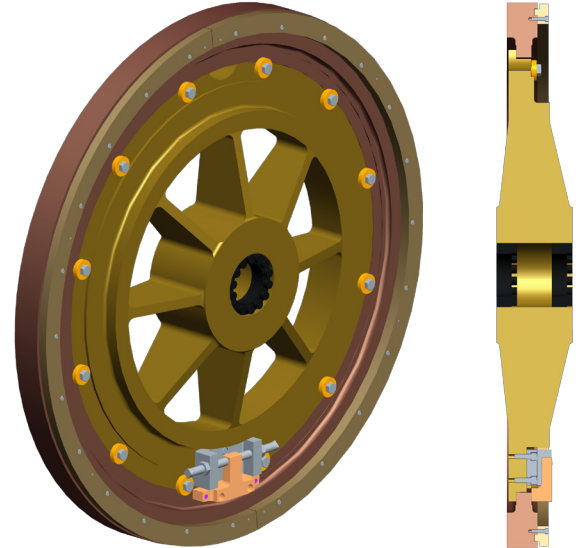

Stolle Rutherford Decorator

Technical Update 1110-1

Stolle has redesigned the bull gear for a 6-color Rutherford Decorator to reduce vibration, improve registration and print quality. The existing one-piece bull gear has been replaced by a two-piece hub and gear design. The size of the hub has been increased to reduce the vibration in the system and reduce registration variation caused by this vibration.

The new design also includes an improved timing mechanism. The position of the gear can now be adjusted with respect to the hub, which will allow the customer to adjust the timing of the gear without loosening the hub on the main shaft. The new two piece design will also allow for faster replacement of the gear since the hub will not need to be removed.

*Redesigned bull gear for the
6-Color Rutherford Decorator*

For more information and pricing on the redesigned bull gear for Stolle 6-color Rutherford Decorators, please contact Mark Santos at Stolle Centennial at +1 303-708-5173 or mark.santos@stollemachinery.com.
