

Filter Life Pressure Gauge

for Stolle Standun Bodymakers

Stolle
Standun Bodymaker
Technical Update 1509-1
Rev. 1

Stolle is offering a new color-coded pressure gauge for the HTI Filtration Hydra-Supreme fluid scrubbing system used on Standun Bodymakers. This new pressure gauge is intended to help machine operators quickly determine the remaining useful life of the filter element. The gauge features a labeled, easy to read, color-coded faceplate. The arrow in the green area of the gauge indicates full filter efficiency, the yellow portion indicates the filter is ending its effectiveness and useful life, and the red portion is a visible indication that the filter requires changing.

The filter life gauge (Stolle part number 095896) is designed to replace the standard pressure gauge on the top of the filter enclosure on a HTI Hydra-Supreme system. These fluid scrubbing systems are used to filter fine particulants from the main lube system oil on all Standun Bodymakers (B5, B6, B7), as well as the Standun Copper (model SC1880).

Technical Specifications:

Case: Stainless Steel

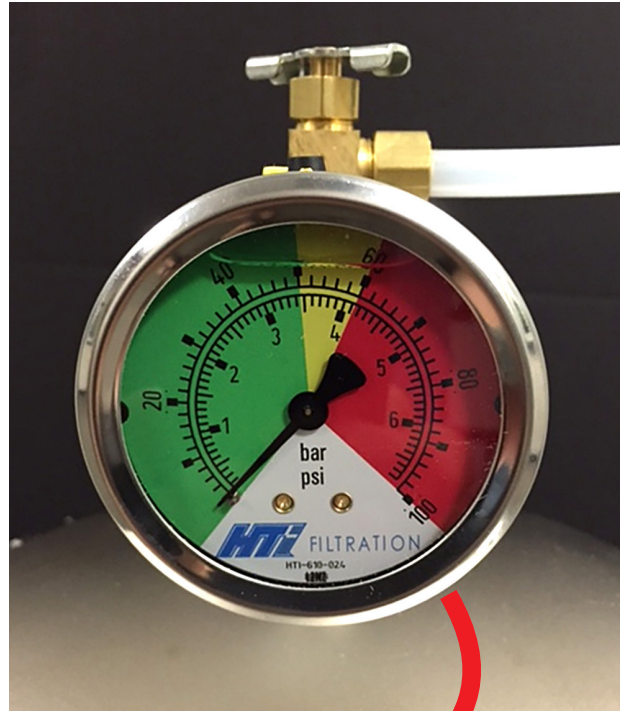

Faceplate: Lexan

Pressure Range: Dual Scale 0-100 PSI / 0-7 BAR

Dampening: Liquid filled

Connection: 1/4" NPT- Rear Center

Note: The gauge is vented to allow adjustment for altitude and temperature unit.
