Technical Bulletin 2608-1 for Stolle SRC Shell Systems

Stolle has a new fall arrest assembly for the auto-lift guards on our shell system presses. The purpose of the fall arrest assembly is to prevent a press guard that is raised by a pneumatic cylinder from falling if the cylinder loses air pressure or other reason, potentially causing injury to personnel. The previous system used two fabric belts with retraction reels to prevent a raised guard from falling. The new system uses a single cable with a pulley and retraction reel, making it more reliable and simpler to maintain.

The new cable assembly will be provided on all new Stolle shell systems with pneumatic auto-lift guards, and belt assemblies will no longer be available. A new cable fall arrest kit is available to replace belt assemblies on existing shell systems, and can be installed by a Stolle service technician.

Previous belt design guard fall arrest assembly
